

FOCAL B.A.M. XL

Acoustic insulation kit

3 materials, 3 functions

Honeycombed damping material

Just like the acoustic foam inside a loudspeaker, the honeycombed damping material attenuates the speaker back wave and then increases the speaker performance.

Aluminum sheet

essential component to the sandwich effect realization. This process permits to increase the performance of the viscoelastic complex.

Viscoelastic complex

Self-adhesive, the butyl complex absorbs the vibrations of the surface with which it's in contact. It highly attenuates the outside noise that gets inside the car. Less noise means more music.

Key points

- Replaces Plain chant
- Soundproof your car
- Attenuates the speaker back wave
- Content: 50 x 200cm sheet

Advantages

- Increases the bass level in your car
- Increases the soundproofing of outside noise
